

Systems, Networks & Concurrency 2020

Uwe R. Zimmer - The Australian National University

Organization & Contents

who could be interested in this?

anybody who ...

- ... wants to work with **real-world** scale computer systems
- ... would like to learn how to **analyse and design operational and robust systems**
- ... would like to understand more about the existing trade-off between **theory, the real-world, traditions, and pragmatism** in computer science
- ... would like to understand why **concurrent systems** are an **essential basis** for most contemporary devices and systems

Organization & Contents

Text book for the course

[Ben-Atiq] & [Ben-Atiq]
Principles of Concurrent and Distributed Programming
 2006, second edition, Prentice-Hall, ISBN 0-13-711821-X

☞ Many algorithms and concepts for the course are in there
 — **but not all!**

☞ References for specific aspects of the course are provided during the course and are found on our web-site.

Systems, Networks & Concurrency 2020

Organization & Contents

Uwe R. Zimmer - The Australian National University

Organization & Contents

who are these people? – introductions

Uwe R. Zimmer & Charles Martin
 Abigai (Abi) Thomas, Aditya Chilukuri,
 Brent Schuetzke, Caltum Snowden, Chimay Garg, Felix Friedlander
 Johannes (Johnny) Schmalz, Nicholas Philip Mihalbradt,
 Tommy Liu, William (Will) Cashman & Yaya Lu

© 2020 Uwe R. Zimmer, The Australian National University page 5 of 25 (Organization & Contents) up to page 10

Organization & Contents

Topics

Language refresher [3]
 1. Concurrency [3]
 2. Mutual exclusion [2]
 3. Communication & Synchronization [4]
 4. Non-determinism [2]
 5. Data Parallelism [1]
 6. Scheduling [2]
 7. Safety and liveness [2]
 8. Distributed systems [4]
 9. Architectures [1]

© 2020 Uwe R. Zimmer, The Australian National University page 8 of 25 (Organization & Contents) up to page 10

Organization & Contents

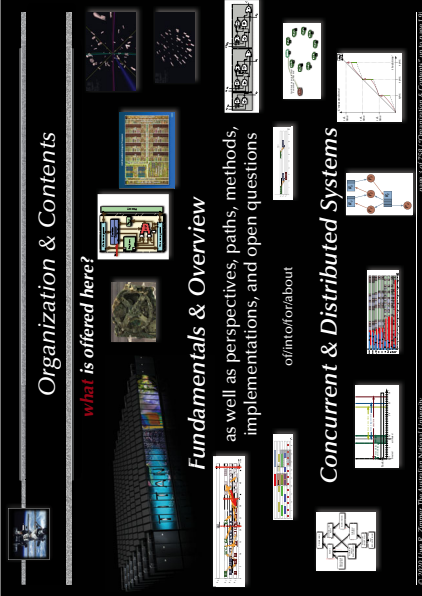

what is offered here?

Fundamentals & Overview

as well as perspectives, paths, methods, implementations, and open questions

of info for/about

Concurrent & Distributed Systems

© 2020 Uwe R. Zimmer, The Australian National University page 3 of 25 (Organization & Contents) up to page 10

Organization & Contents

how will this all be done?

☞ **Lectures:**

- 2 x 1.5 hours lectures per week... all the nice stuff Tuesday 7:00 & Friday 11:00 (all live on-line)

☞ **Laboratories:**

- 3 hours per week... all the rough and action stuff
- times slt on our web-site
- enrolment: <https://cs.anu.edu.au/streams/> (open since last Monday, more slots today)

☞ **Resources:**

- Introduced in the lectures and collected on the course page: <https://cs.anu.edu.au/courses/comp2310/> ... as well as schedules, slides, sources, links to forums, etc. pp. ... keep an eye on this page!

☞ **Assessment (for discussion):**

- Exam at the end of the course (50%)
- plus one hurdle lab in week 4 (5%)
- plus two assignments (15% + 15%)
- plus one mid-semester exam (15%)

Organization & Contents

Topics

1. Concurrency [3]
 - 1.1. Forms of concurrency [1]
 - Coupled dynamical systems
- 1.2. Models and terminology [1]
 - Abstractions
 - Interleaving
 - Atomicity
 - Proofs in concurrent and distributed systems
- 1.3. Processes & threads [1]
 - Basic definitions
 - Process states
 - Implementations
2. Mutual exclusion [2]
3. Communication & Synchronization [4]
4. Non-determinism [2]
5. Data Parallelism [1]
6. Scheduling [2]
7. Safety and liveness [2]
8. Distributed systems [4]
9. Architectures [1]

© 2020 Uwe R. Zimmer, The Australian National University page 9 of 25 (Organization & Contents) up to page 10

Organization & Contents

1. **Concurrency** [3]
2. **Mutual exclusion** [2]

3. **Communication & Synchronization** [4]
4. **Non-determinism** [2]
5. **Data Parallelism** [1]
6. **Scheduling** [2]
7. **Safety and liveness** [2]
8. **Distributed systems** [4]
9. **Architectures** [1]

Topics

- 2.1. by shared variables [1]
 - failure possibilities
 - Dekkers algorithm
- 2.2. by test-and-set hardware support [0.3]
 - Minimal hardware support
- 2.3. by semaphores [0.3]
 - Dijkstra definition
 - OS semaphores

Organization & Contents

1. **Concurrency** [3]
2. **Mutual exclusion** [2]
3. **Communication & Synchronization** [4]

4. **Non-determinism** [2]
5. **Data Parallelism** [1]
6. **Scheduling** [2]
7. **Safety and liveness** [2]
8. **Distributed systems** [4]
9. **Architectures** [1]

Topics

- 3.1. Shared memory synchronization [2]
 - Semaphores
 - Cond. variables
 - Conditional critical regions
 - Monitors
 - Protected objects
- 3.2. Message passing [2]
 - Asynchronous / synchronous
 - Remote invocation / rendezvous
 - Message structure
 - Addressing

Organization & Contents

1. **Concurrency** [3]
2. **Mutual exclusion** [2]
3. **Condition synchronization** [4]
4. **Non-determinism** [2]

5. **Data Parallelism** [1]
6. **Scheduling** [2]
7. **Safety and liveness** [2]
8. **Distributed systems** [4]
9. **Architectures** [1]

Topics

- 4.1. Correctness under non-determinism [1]
 - forms of non-determinism
 - Non-determinism in concurrent/ distributed systems
 - consistency/correctness plus non-determinism a contradiction?
- 4.2. Select statements [1]
 - forms of non-deterministic message reception

Organization & Contents

1. **Concurrency** [3]
2. **Mutual exclusion** [2]
3. **Condition synchronization** [4]
4. **Non-determinism** [2]
5. **Data Parallelism** [1]

6. **Scheduling** [2]
7. **Safety and liveness** [2]
8. **Distributed systems** [4]
9. **Architectures** [1]

Topics

- 5.1. Data-Parallelism
 - Vectorization
 - Reduction
- 5.2. examples
 - General data-parallelism
 - Image processing
 - Cellular automata

Organization & Contents

1. **Concurrency** [3]
2. **Mutual exclusion** [2]
3. **Condition synchronization** [4]
4. **Non-determinism** [2]
5. **Data Parallelism** [1]
6. **Scheduling** [2]

7. **Safety and liveness** [2]
8. **Distributed systems** [4]
9. **Architectures** [1]

Topics

- 6.1. problem definition and design space [1]
 - Which problems are addressed / solved by scheduling?
- 6.2. Basic scheduling methods [1]
 - Assumptions for basic scheduling
 - Basic methods

Organization & Contents

1. **Concurrency** [3]
2. **Mutual exclusion** [2]
3. **Condition synchronization** [4]
4. **Non-determinism** [2]
5. **Data Parallelism** [1]
6. **Scheduling** [2]
7. **Safety and liveness** [2]

8. **Distributed systems** [4]
9. **Architectures** [1]

Topics

- 7.1. safety properties
 - Essential time-independent safety properties
- 7.2. livelocks, fairness
 - forms of livelocks
 - Classification of fairness
- 7.3. Deadlocks
 - Detection
 - Avoidance
 - Prevention (& recovery)
- 7.4. failure modes
- 7.5. Idempotent & atomic operations
 - Definitions

Organization & Contents

1. **Concurrency** [3]
2. **Mutual exclusion** [2]
3. **Condition synchronization** [4]
4. **Non-determinism** [2]
5. **Data Parallelism** [1]
6. **Scheduling** [2]
7. **Safety and liveness** [2]
8. **Distributed systems** [4]

9. **Architectures** [1]

Topics

- 8.1. Networks [1]
 - OSI model
- 8.2. Global times [1]
 - Synchronized clocks
- 8.3. Distributed states [1]
 - Consistency
 - Snapshots
- 8.4. Distributed communication [1]
 - Name spaces
 - Multi-casts
 - Elections
 - Network identification
- 8.5. Distributed safety and liveness [1]
 - Distributed deadlock detection
- 8.6. forms of distribution/redundancy [1]
 - computation
 - memory
 - operations
- 8.7. Transactions [2]
9. **Architectures** [1]

Organization & Contents

1. **Concurrency** [3]
2. **Mutual exclusion** [2]
3. **Condition synchronization** [4]
4. **Non-determinism** [2]
5. **Data Parallelism** [1]
6. **Scheduling** [2]
7. **Safety and liveness** [2]
8. **Distributed systems** [4]
9. **Architectures** [1]

- 9.1. Hardware architecture
 - From switches to registers and adders
 - CPU architecture
 - Hardware concurrency
- 9.2. Language architecture
 - Chapel
 - Occam
 - Rust
 - Ada
 - C++

Topics

- 9.1. Hardware architecture
 - From switches to registers and adders
 - CPU architecture
 - Hardware concurrency
- 9.2. Language architecture
 - Chapel
 - Occam
 - Rust
 - Ada
 - C++

Organization & Contents

1. **Concurrency** [3]
2. **Mutual exclusion** [2]
3. **Condition synchronization** [4]
4. **Non-determinism** [2]
5. **Data Parallelism** [1]
6. **Scheduling** [2]
7. **Safety and liveness** [2]
8. **Distributed systems** [4]
9. **Architectures** [1]

- 24 Lectures

Topics

1. **Concurrency** [3]
 - Conditional critical regions
 - Invariant objects
2. **Mutual exclusion** [2]
 - Message passing [1]
 - Modes and semantics [1]
 - Non-determinism
 - Non-deterministic reductions
 - Addressing
3. **Condition synchronization** [4]
 - From the concrete and abstract
 - Message-passing
 - Implementations
4. **Non-determinism** [2]
 - Non-determinism in communication
 - Consistency/correctness plus non-determinism a contradiction?
 - Select statements [1]
 - Form of non-determinism
5. **Data Parallelism** [1]
 - Data Parallelism [1]
 - Data Parallelism
 - Data Parallelism
6. **Scheduling** [2]
 - Conditional critical regions
 - Invariant objects
 - Message passing [1]
 - Modes and semantics [1]
 - Non-determinism
 - Non-deterministic reductions
 - Addressing
7. **Safety and liveness** [2]
 - Essential time-independent safety properties
 - Livelocks, fairness
 - Forms of livelocks
 - Classification of fairness
 - Deadlocks
 - Detection
 - Avoidance
 - Prevention (& recovery)
 - Failure modes
 - Idempotent & atomic operations
 - Definitions

Organization & Contents

1. **Concurrency** [3]
2. **Mutual exclusion** [2]
3. **Condition synchronization** [4]
4. **Non-determinism** [2]
5. **Data Parallelism** [1]
6. **Scheduling** [2]
7. **Safety and liveness** [2]
8. **Distributed systems** [4]

9. **Architectures** [1]

Topics

- 8.1. Networks [1]
 - OSI model
- 8.2. Global times [1]
 - Synchronized clocks
- 8.3. Distributed states [1]
 - Consistency
 - Snapshots
- 8.4. Distributed communication [1]
 - Name spaces
 - Multi-casts
 - Elections
 - Network identification
- 8.5. Distributed safety and liveness [1]
 - Distributed deadlock detection
- 8.6. forms of distribution/redundancy [1]
 - computation
 - memory
 - operations
- 8.7. Transactions [2]
9. **Architectures** [1]

Organization & Contents

1. **Concurrency** [3]

3. **Condition synchronization** [4]
4. **Non-determinism** [2]
5. **Data Parallelism** [1]
6. **Scheduling** [2]
7. **Safety and liveness** [2]
8. **Distributed systems** [4]
9. **Architectures** [1]

- 24 Lectures

Topics

1. **Concurrency** [3]
 - Conditional critical regions
 - Invariant objects
2. **Mutual exclusion** [2]
 - Message passing [1]
 - Modes and semantics [1]
 - Non-determinism
 - Non-deterministic reductions
 - Addressing
3. **Condition synchronization** [4]
 - From the concrete and abstract
 - Message-passing
 - Implementations
4. **Non-determinism** [2]
 - Non-determinism in communication
 - Consistency/correctness plus non-determinism a contradiction?
 - Select statements [1]
 - Form of non-determinism
5. **Data Parallelism** [1]
 - Data Parallelism [1]
 - Data Parallelism
 - Data Parallelism
6. **Scheduling** [2]
 - Conditional critical regions
 - Invariant objects
 - Message passing [1]
 - Modes and semantics [1]
 - Non-determinism
 - Non-deterministic reductions
 - Addressing
7. **Safety and liveness** [2]
 - Essential time-independent safety properties
 - Livelocks, fairness
 - Forms of livelocks
 - Classification of fairness
 - Deadlocks
 - Detection
 - Avoidance
 - Prevention (& recovery)
 - Failure modes
 - Idempotent & atomic operations
 - Definitions

Laboratories & Assignments

Laboratories [1]	Assignments [2]	Examinations [3]
1. Structure of Programming [1] <ul style="list-style-type: none"> • Program structure • Data structures 	1. Concurrent programming [1][2] <ul style="list-style-type: none"> • Programming with mutex/lock • Mutual exclusion • Synchronization 	1. Module check [1][2] <ul style="list-style-type: none"> • Open & close
2. CAS [1] <ul style="list-style-type: none"> • Atomic types 	2. Parallel Concurrency [1] <ul style="list-style-type: none"> • Shared memory • Memory barrier 	2. Mid-semester check [1][2]
3. Protection [1] <ul style="list-style-type: none"> • Memory based synchronization 	3. Synchronized Data [1] <ul style="list-style-type: none"> • Shared memory • Memory barrier 	3. Final exam [1][2] <ul style="list-style-type: none"> • Examining the acceptance criteria
4. Task Lifetimes [1] <ul style="list-style-type: none"> • Thread-local 	4. Concurrent programming in Multicore Systems [1] <ul style="list-style-type: none"> • Mutual exclusion • Atomic operations • Process communication 	4. Final exam [1][2]

The final mark is based on the assignments (50%) plus the lab mark (50%) plus the exam (50%)
