

Introductory Java 1

J1

Imperative programming languages

Java Standard Library

Types

Hello World

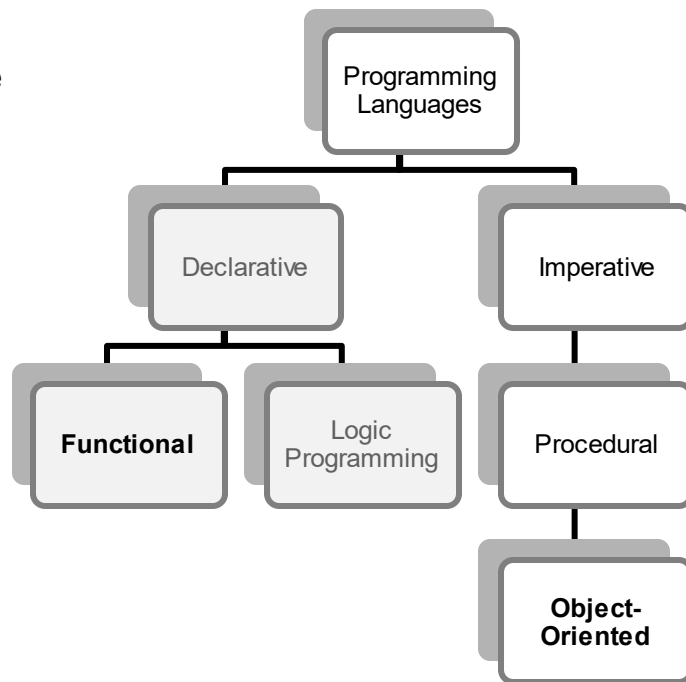

Why Java?

- Learn multiple programming paradigms
- Important example of:
 - Object-oriented programming
 - Large scale programming
 - Programming with a rich standard library

Imperative Programming Languages

Declarative languages describe the desired result without explicitly listing steps required to achieve that goal.

Pure functional languages, like Haskell, only transform state using functions without side effects.

Imperative languages describe computation in terms of a series of statements that transform state.

Object-oriented languages use structured (procedural) code, tightly coupling data with the code that transforms it.

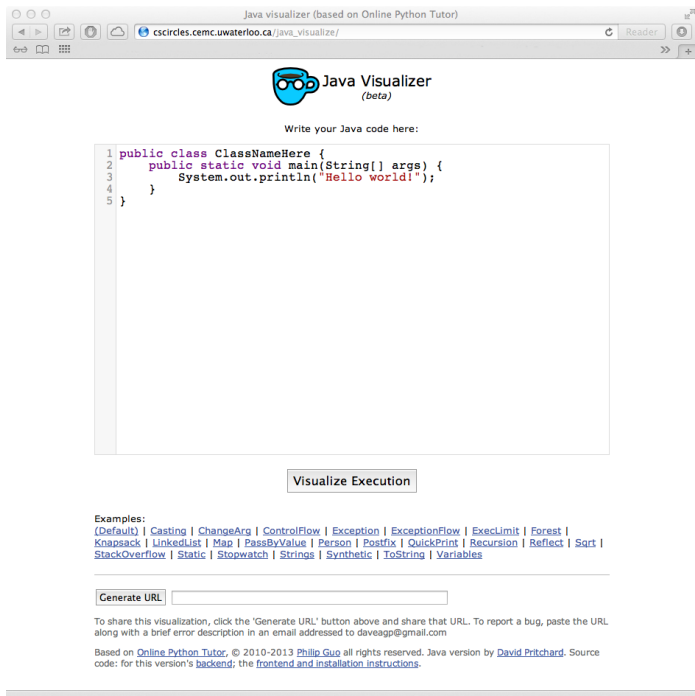

Imperative Programming Languages

- Sequence
- Selection
- Iteration

Object Oriented Programming Languages

- Structured code
- Code (*behavior*) tightly coupled with data (*state*) that it manipulates

The Waterloo Java Visualizer

Java visualizer (based on Online Python Tutor)

cscircles.cemc.uwaterloo.ca/java_visualize/

Java Visualizer
(beta)

Write your Java code here:

```
1 public class ClassNameHere {
2     public static void main(String[] args) {
3         System.out.println("Hello world!");
4     }
5 }
```

Visualize Execution

Examples:
[\(Default\)](#) | [Casting](#) | [ChangeArg](#) | [ControlFlow](#) | [Exception](#) | [ExceptionFlow](#) | [ExecLimit](#) | [Forest](#) | [Knapsack](#) | [LinkedList](#) | [Map](#) | [PassByValue](#) | [Person](#) | [Postfix](#) | [QuickPrint](#) | [Recursion](#) | [Reflect](#) | [Sort](#) | [StackOverflow](#) | [Static](#) | [Stopwatch](#) | [Strings](#) | [Synthetic](#) | [ToString](#) | [Variables](#)

Generate URL

To share this visualization, click the 'Generate URL' button above and share that URL. To report a bug, paste the URL along with a brief error description in an email addressed to daveagp@gmail.com

Based on [Online Python Tutor](#), © 2010-2013 [Phillip Guo](#) all rights reserved. Java version by [David Pritchard](#). Source code: for this version's [backend](#); the [frontend](#) and [installation instructions](#).

A great resource. Type in simple Java programs and watch step-by-step execution. A great way to enhance your understanding of a new language.

The Oracle Java Tutorials

This course follows the structure of the *Oracle Java Tutorials* for the basic introduction to Java.

The tutorials are subject to Oracle's 'Java Tutorial Copyright and License' (Berkeley license).

We will move very fast for the first few weeks. You should use the tutorials to **ensure that you rapidly become proficient in the basics of Java.**

The Java Standard Library

- The Java language is augmented with a large standard library
(.NET does the same for C#)
 - IO (accessing files, network, etc.)
 - Graphics
 - Standard data structures
 - Much more
- Using and understanding the standard library is part of learning a major language like Java or C#.
- Rich standard libraries are a key software engineering tool.

Data types

The *type* of a unit of data determines the possible values that data may take on.

- Weak v strong
 - Must all data be typed? Can types be coerced or converted?
- Static v dynamic
 - Is checking done at compile-time or run-time?

Haskell: strong, static

Java: strong, static and dynamic
