

A painting of a person walking on a path through trees towards a body of water. The scene is rendered in a soft, impressionistic style with visible brushstrokes. The path is sandy and leads from the foreground towards a line of trees. The trees have green and yellow foliage. In the background, there is a body of water and a distant shoreline with some buildings. The sky is a mix of blue and white, suggesting a bright, slightly overcast day.

A06 Maps: HashMap and TreeMap

Map as an ADT

A Map interface

A hash-table-based Map implementation

A tree-based Map implementation

ADT Recap

First-principles implementation of three Java container types:

- List
 - **ArrayList**, **LinkedList** implementations (A1, A2)
- Set
 - **HashSet**, **TreeSet** implementations (A3, A4, A5)
- Map
 - **HashMap**, **TreeMap** implementations (A6)

Introduced **hash tables**, **trees** (A4, A5)

The Map ADT (also known as Associative Array)

A map consists of **(key, value)** pairs

- Each key may occur only once in the map
- Values are retrieved from the map via the key
- Values may be modified
- Key, value pairs may be removed

Our Map Interface

We will explore maps using a simple interface:

```
public interface Map<K, V> {  
    V put(K key, V value);  
    V get(K key);  
    V remove (K key);  
    int size();  
}
```

```
fruit.get("grape", 3.00)
```

```
{ grape }
```

```
fruit
```
